WELDING ROD OVEN PE-5A

Welding electrodes should be stored in a heated enclosure to insure optimum performance.
The coatings on electrodes will absorb moisture and this moisture will affect
the ability of the electrode to produce a quality weld.
Properly stored electrodes reduce
the chances of weld porosity or cracking.

The PE-5A is a electrode oven that is easy to move. The oven can hold up to 25 kilos of electrodes. The PE-5A has a temperature regulator for temperatures between 50 and 200 degrees Celsius.

Our welding rod ovens are:

- **Easy to load**
- **Lightweight**
- **Fast Access to Welding Electrodes**
- **Low Cost Control of Welding Quality**

PRODUCTCODE: PE-5A

Electrode capacity	25 Kg
Heating element	700W WIRE WRAP
Voltage	60 V-120V AC/DC 240V AC
Average stabilized temperature	50 - 200 °C
Thermostat	Adjustable thermostat with high-limit switch
Electrode length	500 mm
Exterior dimensions	400 X 340 X 690 cm
Net weight	19.75 Kg
